<i>Project Name</i>	<i>Retail Store Stock Inventory Analytic</i>
<i>Maximum Marks</i>	<i>10 Marks</i>

Model Performance testing:

S.No.	Parameter	Screenshot / Values
1.	Dashboard design	<p>The dashboard is created with three category i.e. Overview, Sales, Price.</p> 

		
2.	Data Responsiveness	The data is downloaded from an external API and uploaded in the IBM cognos analytics with watson and a data module is created.
3.	Amount Data to Rendered (DB2 Metrics)	The dataset which is downloaded from the external API and uploaded is rendered from the DB2.
4.	Utilization of DataFilters	The data filters are used for pre-processing the data i.e cleaning of data , removing the null value. The unwanted columns are removed from the data-set and the additional data which are required are added to the data-set.

5.	Effective User Story	<p>The story is created with two scenes i.e. Introduction, sales by year & stock.</p>  <p>The screenshot shows the Qlik Sense Story view. It features a story titled 'sales by year and stock'. The story contains two scenes: 'sales by year' (a line chart) and 'stock by sales' (a bar chart). The 'sales by year' scene is highlighted with a blue box. The right sidebar shows the 'Story properties' panel with options for 'Scenes', 'Story type', 'Scene transition', 'Canvas', 'Color and theme', and 'Advanced'.</p>
6.	Descriptive Reports	<p>The report is created with two visualisations i.e.result, sales greater than 350.</p>  <p>The screenshot shows the Qlik Sense Report view. It features a report titled 'Retail Inventory Stocks Analysis'. The report contains two visualisations: a table titled 'Retail Inventory Stocks Analysis' and a bar chart titled 'Customized Column Visualization'. The table has columns for 'Date' and 'Sales'. The bar chart shows sales data for different dates.</p>
